Slider

Add a slideshow to your homepage

The « Slider » module for Prestashop allows you to add a slideshow to your homepage and manage it easily in your back office.

Based onNivo Slider, this module will allow you to :

- Add/Modify/Delete slides

- Add/Modify/Delete links, titles and alternative texts of these slides

- Manage the appearance of the slideshow: size, transition effects, navigation images…

- Manage the different languages of your shop

INSTALL / UNINSTALL :

Installation of the « Slider » module is made by the classic step :

- In the « Administration => Modules » tab of your shop, add the module from your computer or PrestaShop Addons
- Once done, module will be visible in the « Front office features » part under the name « Slider ».
  Click « Install »

To uninstall the module, do the same steps.

The disable is simply done in the back office.

Slider

CONFIGURATION :

Once installed, a new tab « Slider » appears under the « Modules » tab.

This page can be divided into two parts.

The « configuration of the slides » part

First choose the language for which you want to add the images.

Then you can add your slides' images (10 maximum) and configure for each of them:

- A link

- A title

- An alternative text

- And choose if the slide is active or not.

Slider

Once your slides created, you can whenever you want:

- Modify each of the elements of the slides

- Disable some of them

- Change their order of appearance by simply clicking on the Up and Down arrows

- Delete those you're not using anymore by checking the « Delete » box and updating the slides.

Slider

The « configuration of the slideshow » part :

This part can also be divided into 4 parts :

- The first one allows you to manage the effects of the slideshow

- In the second one you can configure the size (width and height) of your slideshow, so that you can adapt it tou your shop

- The third one allows you to choose the image of the direction arrows and their position on the slideshow

- The last one allows you to choose the image of the control bullets and their position on the slideshow

All you need to manage the appearance of your slideshow.

Slider

TIP:

To create an image you can use for the navigation arrows, nothing easier !
Let's take an example :

- First you need 2 images : a right arrow and a left arrow.
- Let's say each of these images are 30x30 pixels
- Create a new image of 60x60 pixels: twice your images height x twice their width so you have 4 squares of 30x30 pixels each.
- Paste your left arrow in the upper left corner and your right arrow in the upper right corner
- At the bottom, paste these same images and apply them an effect (opacity, different colors…) which will appear when you users will hover them.
- Caution ! Each image must be centered in its square of 30x30 pixels

The basic image of the module is designed like this.

30 x 30	30 x 30
30 x 30	30 x 30

You can also use 4 rectangular images. All you have to be careful of is that the 4 rectangles must have the same surface.

To create an image for the bullets, just do the same:

- If you have a 20 x 20 pixels image
- Create a new image of 20 pixels width and 40 pixels height
- On the top put the image of the inactive bullet and at the bottom put the image of the active one

The basic image of the module is designed like this.

20 x 20
20 x 20

CONCLUSION:

I hope this module will help you and simplify your everyday work.
Do not hesitate to send me a mail at contact@ebewe.net to tell me what you think about it.
